### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the claimed reactor with reaction mixture channels in a burner reaction chamber with the feature of a high temperature reaction having a short residence time then a quench area rapidly cooling the mixture in a fire resistant ceramic chamber having at least 80% alumina content is not found in the prior art either singly or in combination. The closest prior art is considered reference A, cited in this action, which discloses a combustion chamber mixture ignition and a water quench reactor. The considered patentably distinct feature of the claimed invention is found in the sole independent claim. Other references cited in this action are considered to disclose one or more elements of the claimed invention, but do not provide the motivation to combine those teachings with the closest prior art reference. Finally, the claimed preferable thickness is not considered indefinite under the second paragraph of the 112 section of the patent code, because that language does not fall within the decisions regarding claim language limitations and it is clear that the limitations are part of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
